

## Gazebo Walkway Material Estimate

Walkway length = 184 feet    Sitting area = 27 x 20 feet

The salesman at Guy C. Lee recommended using the Cedar color decking and post while going with a white railing system from Klondike (the Geo railing system does not come in 42" height).

\*5/4" x 6" Geo Decking Boards - \$14,000

6" x 6" Geo Decking Posts – \$2,970

Geo Decking Post Base Trim – \$940

Geo Decking Low Profile Post Caps – \$1000

42" x 8' Kodiak Rail System – \$15,400

Total for materials only: \$34,310 (Does not include rebuilding the Gazebo)

\*\*1 1/2" x 8 Geo Decking Board (Commercial) – \$29,000

If we Use the commercial board the material cost will be: \$49,310

Note: Attachment hardware (the screws) is not included. The current rail system is approximately 31" and will have to be raised to 42" this will require the replacement of all 6X6 posts (price not included).

\*The new 5/4 decking will require joist to be located at 16" on center. It may be considered that when removing the existing deck boards that the joist may have to be replaced (price not included).

\*\*The Commercial Geo Decking can be installed up to 30" on center and will not require additional joists. Therefore, there will be less labor cost.

The white railings will need to be cleaned from time to time as a green algae will develop on them over time. This does not appear on the treated wood railings and decking.
